Class-D - Massive Power, Perfect Sound

Thanks to our revolutionary Class-D amplifier technology, we are able to provide you with enormous power and incredible sonic performance in an easy-to-use, ultra-portable and lightweight package. Class-D amplification makes all the difference, offering

the ultimate in energy efficiency and eliminating the need for heavy power supplies and massive heat sinks. This amazing technology makes it possible to design and build extremely-powerful products that are significantly lighter in weight than their traditional counterparts, while using less energy and protecting the environment.

Tube Preamp, Maximum Tone

Bass players love one thing – great tone, so we set out to satisfy even the most-demanding tone seeker with the VEYRON T's well-executed front end. The 3 x 12AX7 tube gain stage, in concert with the passive Baxandall Bass and Treble controls, plus the active tube-driven Mid EQ controls, delivers tone like only an authentic tube preamp amp can. Our tube design operates at high voltages, providing this preamp with unheard of headroom to honor all of your playing dynamics; from your subtly-nuanced signature riffs and bass lines, to your most powerful, attention-grabbing solos. The VEYRON T is all about tone,

and this highly-versatile and responsive preamp provides an abundance of headroom for consistently crystal-clear and faithful sound reproduction, or just the right amount of tube grind in your tone – no matter what style of music your gig calls for.

Studio-Quality Optical Compressor - Stairway to Heaven

Our studio-grade optical compressor is based on classic and famous studio equipment from the 70's. This totally transparent and musical compressor design allows your full dynamic range to shine through until your signal reaches the compression threshold, which is indicated by the highly visible status LED. The compressor increases sustain and gently smoothens out signal peaks, which is especially handy when you're laying down the funk, à la slap and pop – or hammering home your most-aggressive metal lines. The resulting output level lets you unleash powerful and impact-laden bass lines, while still sitting right where you need to be in the mix!

DYNAMIZER Technology - The Secret Weapon

DYNAMIZER allows you to take full advantage of every single Watt of your amplifier!

What is known as Parallel_Compression or “New York” compression, is a dynamic range compression technique used as a secret weapon in high-end sound recording and mixing. Parallel compression is achieved by mixing an unprocessed “dry”, or lightly compressed, signal with a heavily compressed version of the same signal. Rather than bringing down the highest peaks for the purpose of dynamic gain reduction, it reduces the dynamic range by bringing up the softest sounds, adding audible detail. It is most often used on stereo percussion buses in recording and mixdown, on electric bass, and on vocals in recorded and live concert mixes.

Now this amazing technology is available to you! We have integrated parallel compression in our DYNAMIZER technology to provide you with tone and dynamics that are unheard of to date. By working directly with the amplifier, our DYNAMIZER technology adds incredible detail and powerful, fat punch, so your sound is always impeccable, whether you're playing super-soft – or at the extreme volume levels that push a dB-meter to the max!

Sound Off

As bass players ourselves, we know that only the ultimate in tonal flexibility will do, so we designed the VEYRON T to satisfy the most-demanding bassist – you! The passive Bass and Treble Baxandall EQ circuit provides the sound and feel of traditional tube amps, while the active, tube-driven Mid control, working in tandem with a sophisticated 3-position mid-frequency switch, helps you easily dial-in any tone you can imagine. A handy Mute switch allows you to tune up silently, and the -15 dB input switch enables you to jump between passive and active basses in a flash.

Get Connected

Equally adept in the studio, on the stage or in your practice room, the VEYRON T is replete with convenient options and connectivity to help you get the job done. For recording and live performance applications, we've provided a world-class, balanced DI output. Also included is a dedicated FX Loop for connecting your external effects and a switchable Tuner Output that's perfect for use with a tuner, or as a live monitor feed. An Aux input is provided for playing along with your favorite music, and the headphone output offers speaker cabinet emulation for superb tone while practicing. We've even provided connectivity for our optional FSB102B footswitch, so you can remotely-control Mute and FX Loop functions.

Everything You Need in One Portable Package

The VEYRON T is the stuff that bassists' dreams are made of – a completely customizable front end and EQ section built around an astonishingly-musical tube preamp, mated to a remarkably potent, DYNAMIZER-regulated 2,000-Watt power section. The VEYRON T is ultimately lightweight and portable, while including all the extras – Aux input, FX Loop and Headphone out – that the modern player demands.

Conceived and designed by BUGERA Germany and covered by our 3-Year Limited Warranty Program, the BV1001T VEYRON T is sure to be the last amplifier you will ever need. Truly a do-it-all solution for any bass amplification requirement, head on down to your local authorized BUGERA dealer to test-drive the VEYRON T today.
