

INNOX MB-50

Lectern lamp with rechargeable battery

User instructions & warnings

Battery hazard: The INNOX MB-50 is equipped with a built-in Li-ion battery. This battery is located in the base of the lamp.

The built-in battery has a capacity of 4000 mAh and powers the lamp for around 7 to 60 hours, depending on the brightness setting.

The battery is protected by the plastic housing of the MB-50. The battery cannot be replaced by the user.

CAUTION

Do not expose batteries to excessive heat such as sunshine, fire and the like.

Do not leave batteries in an extremely high-temperature environment, as this may cause explosions or leakage of flammable liquids or gas.

Do not burn batteries, do not place batteries in a hot oven, and do not crush or cut batteries, as this may cause explosions.

Do not subject batteries to extremely low air pressure (high altitudes), as this may cause explosions or leakage of flammable liquids or gas.

Do not dispose of this product with general household waste. Batteries can contain substances that may harm the environment. If they are properly recycled, used batteries are a valuable source of reusable materials. Contact your local government for information on battery disposal.

Operating instructions

1. The lamp has 3 buttons: on/off, colour temperature and brightness.
2. Press the on/off button to switch the light on, and press it again to switch the light off.
3. Press the colour temperature button repeatedly to cycle through the 4 colour temperatures: white, warm white, amber and mixed light.
4. Press the brightness button repeatedly to cycle through the 3 brightness levels: high, medium and low.

5. The lamp has a memory function: it remembers the selected colour temperature and brightness, and uses these settings again the next time you switch it on.

Charging

The lamp is powered by a built-in rechargeable Li-ion battery. On a full charge, the battery lasts up to 7 hours on the highest setting and up to 60 hours on the lowest setting, depending on use.

1. Connect the USB charging cable to a USB port of a computer or laptop, or to a USB charger (such as a smartphone charger). The output of the USB charger must not exceed 5 V.
2. Charging takes about 2.5 to 3 hours. While charging, the indicator light flashes. When the battery is fully charged, the indicator light stays blue.

Product care

1. Charge the lamp for 12 hours before using it for the first time.
2. When the light becomes very dim, charge the lamp in time. This prevents the battery from running completely empty and extends its lifespan.
3. Recharge the lamp at least once a month, if possible.
4. Only clean the lamp with a soft, damp cloth when needed.
5. Do not use the lamp if wires or internal parts are exposed after it has been dropped, and report this to your dealer immediately.
6. Never use a USB charger with an output higher than 5 V to charge the lamp.

Specifications

Light	
Light source	57 SMD LEDs
Colour temperature	4 settings (1400–7000 K)
Brightness	3 levels (high, medium, low)
LED lifespan	Approx. 100,000 hours
Power consumption	5 W

Power & battery	
Battery	Built-in Li-ion, 4000 mAh
Operating voltage	5 V
Battery life	Approx. 7 hours (high) to 60 hours (low)
Charging	Via USB-C, approx. 2.5–3 hours
Power adapter	Not included
Design	
Type	LED lamp with gooseneck
Mounting	Spring-loaded clamp, adjustable to surface thickness
Lamp head length	400 mm
Gooseneck diameter	10 mm
Materials	Plastic, metal hose, silicone tube
Weight	320 g

	<p>WEEE: Dispose of this product properly. This product is part of the WEEE directive – the Waste Electrical and Electronic Equipment directive. The requirements stated in this directive apply to all manufacturers and producers of electronic equipment in the EU. Do not dispose of this product together with regular household trash. Contact your local government for more information about proper disposal and recycling of electronic products in your region. By recycling this product properly after use, we can work together to enjoy these products and also protect our environment from being polluted.</p>
	<p>CE: The CE mark indicates that the product complies with applicable European directives and regulations.</p>
